

Md. Fajla Rabby

Software Engineer — PHP / Laravel · LLM Integration · React

Dhaka, Bangladesh · +880 1919-703167 · fajla.rabby008@gmail.com · [Portfolio](#) · [GitHub](#) · [LinkedIn](#)

SUMMARY

Software engineer with 3 years of experience, mostly in PHP/Laravel with working React on the side. Currently at TubeOnAI, a Laravel 12 SaaS that summarizes YouTube, podcast, audio, and document content through five LLM providers — building the REST API, the billing system, and the LLM integration layer (streaming, provider fallbacks, cost controls). Daily Claude Code user who reviews, tests, and refactors generated code before shipping it. Before this: two years on an Oracle-backed garment ERP used by factory teams every day.

EXPERIENCE

Backend Developer · TubeOnAI — AI content-summarization SaaS (Remote)

Sep 2025 – Present

Laravel 12, PHP 8.4, MySQL, Redis, AWS S3, LLM APIs

- Built the unified V3 content-submission REST API end to end — one contract replacing nine legacy type-specific endpoints, with request validation, ownership authorization, and consistent error responses.
- Maintain the LLM integration layer spanning OpenAI, Azure OpenAI, Claude, Gemini, and OpenRouter via a LiteLLM gateway: streaming with truncation retry, provider fallback, BYOK key isolation, and per-request cost controls.
- Migrated billing from minute-based metering to a credit-based reserve/settle/refund flow; fixed a credit-settlement race condition and two LLM retry storms that were wasting third-party API spend.
- Closed an IDOR on collection endpoints by enforcing ownership checks on every read and write path; stopped internal exception details leaking through public API error responses.
- Eliminated an N+1 on the collection-items API and ended a P1 infinite-retry incident with a schema fix (TEXT → MEDIUMTEXT).
- Wrote Pest 4 feature tests for 10+ previously untested endpoint groups, including the vector store and payments; 200+ merged pull requests in 10 months through a PHPStan/Pint/Pest CI pipeline.

PHP Developer · Logic Software Limited (Dhaka, Bangladesh)

Dec 2023 – Aug 2025

PHP, Oracle SQL, JavaScript, jQuery, HTML/CSS

- Built and maintained modules in an enterprise garment-industry ERP — production tracking, inventory, and management reporting — used daily by factory operations and merchandising teams.
- Developed admin screens end to end: HTML/CSS/JavaScript front ends over PHP back ends, for data entry, approvals, and audit logs.
- Wrote and tuned complex Oracle SQL against multi-million-row production tables; rewrote slow reports to cut load times from minutes to seconds.
- Handled production-support tickets from factory users and worked with QA on regression fixes.

Junior Laravel Developer · Xerone IT — Contract (Dhaka, Bangladesh)

Aug 2023 – Oct 2023

Laravel, cURL, DataTables

- Shipped a Telegram bot in Laravel for an automated user-interaction product on a fixed 3-month engagement.
- Integrated payment gateways for multiple countries; built reusable cURL API clients and server-side DataTables for admin reporting.

TECHNICAL SKILLS

- **Languages:** PHP 7/8, JavaScript (ES6+), SQL, HTML5, CSS3, TypeScript
- **Backend:** Laravel 12, REST API design, webhooks, queue workflows (Laravel Horizon), Node.js (Express)
- **Frontend:** React, Tailwind CSS, responsive layouts, Livewire, Filament 3, Vite
- **AI / LLM:** production integration of OpenAI, Azure OpenAI, Claude, Gemini, and OpenRouter (via LiteLLM) — streaming, fallback, token/cost controls; prompt engineering; Claude Code (daily), Cursor (basic familiarity)
- **Databases:** MySQL 8 (data modeling, complex queries, migrations), Oracle SQL, Redis 7, ClickHouse
- **Testing & quality:** Pest 4, PHPUnit, PHPStan, code review, CI/CD on GitHub Actions
- **Security:** secure coding (OWASP Top 10) — access control, input validation, secrets handling (BYOK key isolation)
- **Infra & tooling:** Git, Docker, AWS S3, Sentry, Grafana, Stripe Cashier

EDUCATION

Varendra University, Rajshahi

2019 – 2023

B.Sc. in Computer Science & Engineering
